A definition for effective teaching is teaching that utilizes instructional strategies that are most appropriate for the content and the student, and is carried out in a proficient manner that allows for real learning. The two main types of learning methods are student-centered, which is the preferable method, and teacher-centered. Student-centered learning involves using a variety of teaching strategies to meet the individual needs of the students, such as modifying assignments to fit students. Even though this is the best method, there are times when teacher-centered methods need to be used in the classroom. This method requires the activity to be focused on the teacher. For example, when introducing a new concept, the teacher may need to be the center of attention with a lecture or presentation.
